

We help our clients understand and control their risks through comprehensive management of their activities in various sectors, offering them specialized, high-quality consulting.

We advise our clients on:

Identification  
Understanding  
Reduction  
Comprehensive control

Risk

Our risk management training  
comes in three forms:

Permanent  
On demand  
Special Event

Manage Risk

We offer software solutions for our  
clients:

**BowTieXP**  
visual risk assessment

**CST Risk**  
IncidentXP  
one platform to analyze incidents

## what do we do?

We design, update, and improve risk management models in organizations, relying on specialized risk methodologies and efficient management models.

### OUR CONSULTANTS

Specialized professionals who employ a wide variety of methodologies (specific or generic) designed to cover the objectives and scope of their risk analysis.

#### PROCESS RISK

Risks of processing hazardous chemicals.

- Identification of hazard scenarios
- Risk assessment.
- Layer of protection analysis.
- Barrier analysis.
- Process safety management, among others.

#### PROJECT RISK

Risks in the planning, execution and abandonment of projects:

- Risk management planning.
- Risk identification
- Qualitative and quantitative analysis.
- Risk response planning.
- Monitoring and control.

#### CORPORATE RISK

- Definition of context, scope, and organizational criteria
- Policies, risk identification and prioritization
- Qualitative and quantitative risk assessments
- KRI definition (*Key Risk Indicators*)
- Response plans, risk monitoring and control, among others.

More than   
**400 projects**  
successfully executed

At CST, our clients benefit from specialized consulting services in the identification, interpretation, understanding, assessment, and comprehensive management of risks

We offer risk and management training in three formats. We adapt to your requirements and strive to exceed our clients' expectations.

## ⌚ Permanents

Online training (asynchronous modality), you can train at your own pace and on your own schedule.

- Introduction to and management of risks.
- What If/SWIFT methodology: Identifying hazard scenarios in any activity.
- Bowtie methodology: Understanding, communicating, and analyzing risk in the most intelligent way.
- HAZOP methodology: Identifying hazard scenarios in industrial processes involving hazardous substances.
- LOPA methodology: Analyzing the layers of protection of your facility.
- Understanding and interpreting the elements of the PPAM - PSM.

## 🕒 On Demand

Specialized training for our clients. This will be developed at the request of companies or through the formation of interested groups.

**More  
than 300  
professionals  
have been trained**

## 📅 Events:

- Seminars
- Conferences
- Talks
- Specialized courses in different locations.

To view our portfolio of available courses and learn more, visit us at [cstrisk.com](http://cstrisk.com)

Currently at CST we are offering three products for the optimal management of small, medium and large companies, through our technological tools.

*We are developers of CST OPPE CRM, a technological tool inspired by the PMI® (Project Management Institute) project management model to manage opportunities (Leads/Opportunities), proposals (Proposal/Quotation), projects (Projects) and deliverables (Deliverables).*

We are developers of this software specialized in the registration, documentation and generation of reports of risk analysis workshops; such as HAZOP, What IF, HAZID, LOPA, Constructability and others.

## Bowtie Suite

CST, as an official partner of Wolters Kluwer Enablon, offers a Bowtie Suit which comprises:
